

Date: 1/6/2026

My objectives for the day:

- to understand the basics of machine learning
- to get familiar with the internship workflow

List of activities I did today:

- ~~attended~~ learned about machine learning and its orientation
- ~~understood~~ the difference between the supervised and unsupervised learning.

My critical observation:

- Machine learning uses data and algorithms to identify patterns and make predictions.

What did I learn today:

- learned the basic concepts and types of machine learning
- understood how ML can be used to solve real world problems.

What I would have done better:

- I could have spent more time understanding the basic ML concepts

My plan for tomorrow:

- to learn python libraries used for machine learning.

Student Signature: Sanika HY

Faculty-in-Charge Signature:

Date: 21/6/2026

My objectives for the day:

To understand the python libraries commonly used in machine learning

List of activities I did today:

- Practiced basic Numpy operations and arrays
- Learned how to create and manipulate Pandas Dataframes
- Practiced loading a dataset using Pandas

My critical observation:

Numpy is useful for numerical operations, while Pandas makes data handling and analysis easier.

What did I learn today:

- Learned the basic uses of Numpy & Pandas
- Understood how datasets can be loaded and organized

What I would have done better:

I could have practised more Pandas functions to improve my understanding.

My plan for tomorrow:

To learn more about data cleaning and handling missing values.

Student Signature: Sanika H.Y.

Faculty-in-Charge Signature:

Date: 3/6/2026

My objectives for the day:

To understand the importance of data cleaning in machine learning

List of activities I did today:

- studied different types of missing values in datasets
- Practised checking missing values using Pandas.
- Worked with simple datasets to practice data cleaning

My critical observation:

Poor quality or incomplete data can affect the performance of a ML

What did I learn today:

- learned how to identify missing value in a dataset
- understood the importance of cleaning data before model training.

What I would have done better:

I could have practiced with larger and more varied dataset.

My plan for tomorrow:

To learn about data visualisation & explore data ^{patterns} in datasets.

Student Signature: SanikaHY

Faculty-in-Charge Signature:

Date: 1/6/2026

My objectives for the day:

To understand the data visualisation techniques used in machine learning

List of activities I did today:

- Learned about different types of charts and plots
- Practised creating basics visualisation using matplotlib
- Explored relationship between different features in datasets

My critical observation:

Visualisation makes it easier to understand the patterns and unusual values in datasets

What did I learn today:

- Learned how to represent data using different graphs
- Understand the importance of visualisation before building ML model.

What I would have done better:

I could have practised creating more types of plots

My plan for tomorrow:

To learn about exploratory data analysis.

Student Signature:

Aniket14

Faculty-in-Charge Signature:

Date: 5/10/2026

My objectives for the day:

To understand exploratory data analysis (EDA)

List of activities I did today:

- explore the structure and columns of sample dataset
- Check the data types and basic statistical information
- Analyse the relationship b/w different features.

My critical observation:

EDA helps in understanding the datasets

What did I learn today:

Learned the basic steps involved in EDA

What I would have done better:

understood how statistical information can help in analysing data.

My plan for tomorrow:

I could have explored the dataset in more detailed using additional visualisation technique.

Student Signature:
Cariketty

Faculty-in-Charge Signature:

My objectives for the day:

Date: 6/6/20

To understand feature selection in ML

List of activities I did today:

Studied the concept of features and target variables

Identified input features and output variables in datasets

My critical observation:

Selecting relevant features can make a model simpler and may improve its prediction.

What did I learn today:

Learned the difference b/w features & target variables.

What I would have done better:

I could have practised more feature selection techniques.

My plan for tomorrow:

To understand the basic steps involved in training a model

Student Signature: Saikat H.

Faculty-in-Charge Signature:

Date 7/6/26

objectives for the day:

To understand the process of training a model.

Activities I did today:

Learned about training data and testing data.

Applied the purpose of splitting a dataset.

critical observation:

Dividing data into training and testing sets helps check how well a model performs.

What I learned today:

Learned the basic process of training and testing.

What I would have done better:

I could have experimented with different train-test split ratios.

My plan for tomorrow:

To learn about basic supervised learning algorithms.

Student Signature: Gurpreet Singh

Faculty-in-Charge Signature:

Date: 8/6/26

My objectives for the day:

To understand the basics of supervised learning algorithms.

List of activities I did today:

- Studied the concept of supervised learning.
- Learned about classification and regression.

My critical observation:

The choice between classification & regression depends on the type of output that needs to be predicted.

What did I learn today:

- Learned the difference between classification and regression.
- Understood that classification predicts categories, while regression predicts values.

What I would have done better:

I could have practiced more examples to clearly understand the difference b/w two techniques.

My plan for tomorrow:

To learn about K-nearest algorithms working process.

Student Signature: Soni Katty

Faculty-In-Charge Signature:

My objectives for the day:

Date: 9/6/2026

- To understand the KNN algorithms
- To learn how KNN can be used for classification problems.

List of activities I did today:

- Studied the working principle of KNN algorithms
- Learned how KNN uses many data points for prediction.

My critical observation:

The value of k can affect the prediction results of KNN model.

What did I learn today:

- Learned the basic working of KNN
- Understood how distance b/w data point is used for classification

What I would have done better:

I could have tested the model with different k values.

My plan for tomorrow:

To learn about another supervised learning algorithms and practice implementation

Student Signature:

Saniketty

Faculty-in-Charge Signature:

Date: 10/6/21

My objectives for the day:

To understand the decision tree algorithm.

List of activities I did today:

- Studied the basic structure and working of decision trees.
- Learned about nodes, branches, and leaf nodes.

My critical observation:

Decision trees are easy to understand - and because of their prediction can be represented as sequence of decision.

What did I learn today:

I could have experimented with different tree parameters.

What I would have done better:

Tested with more datasets.

My plan for tomorrow:

To learn about another classification algorithms and compare its working with tree.

Student Signature: Ganika HV

Faculty-in-Charge Signature:

Date: 11/6/26

My objectives for the day:

To understand logistic regression for classification.

List of activities I did today:

Studied the basic concept of logistic regression.

Learned how probability is used for classification.

My critical observation:

Logistic regression is useful for classification problems where the output belongs to different categories.

What did I learn today:

Learned the basic working of logistic regression.

What I would have done better:

I could have practiced with more datasets.

My plan for tomorrow:

To learn about model performance evaluation.

Student Signature:

Sanket H V

Faculty-in-Charge Signature:

My objectives for the day:

Date: 12/6/21

To understand how the performance of ML looks.

List of activities I did today:

Studied accuracy precision recall & F-score.

learned how to calculate classification performance.

My critical observation:

Using multiple evaluation metrics gives a better understanding.

What did I learn today:

I could have learned a purpose of common classification evaluation matrices.

What I would have done better:

I could have practiced evaluation matrices with different datasets.

My plan for tomorrow:

To begin working with dataset for iris flower prediction.

Samiyah

Student Signature:

Faculty-in-Charge Signature:

Date: 13/6/26

Objectives for the day:

To understand Iris flower dataset

of activities I did today:

Introduced the Iris flower classification project

loaded with iris dataset using python and pandas.

My critical observation:

The dataset contains measurable flower characteristics that can be used to distinguish different flower species.

What did I learn today:

learned how to explore the dataset before building a model.

What I would have done better:

I could have explored the relationships between different flower features.

My plan for tomorrow:

To clean and preprocess the Iris dataset.

Student Signature:

Faculty-in-Charge Signature:

My objectives for the day:

Date: 14/6/20

To prepare the Iris dataset.

List of activities I did today:

- checked the iris dataset for missing values.
- Verified the data types of the features.

My critical observation:

Properly preparing the dataset is important before applying a ML algorithm.

What did I learn today:

Learned how to separate features and target values.

What I would have done better:

I could have performed a more detailed analytics.

My plan for tomorrow:

To visualise the Iris dataset and study the relationships.

Student Signature: Sandeep HP

Faculty-In-Charge Signature:

My objectives for the day:

Date: 15/6/26

To analyze the relationships between the features of the Iris dataset

List of activities I did today:

- Created basic plots for Iris dataset
- Compared sepal and petal measurements

My critical observation:

Petal measurements showed noticeable differences among flower species.

What did I learn today:

Learned how visualization helps identify patterns b/w features.

What I would have done better:

I could have created more visualisations

My plan for tomorrow:

To select suitable features and prepare the Iris dataset.

Student Signature:

Faculty-in-Charge Signature:

My objectives for the day:

Date: 16/6/2020

To select the suitable features for the iris model

List of activities I did today:

- Reviewed the features identified during EO
- Selected the relevant flower measurements as input features.

My critical observation:

The selected flower measurements provide useful information for distinguishing between different species.

What did I learn today:

Learned how feature selection and data splitting is applied before model training

What I would have done better:

I could have compared different feature combinations before selecting the final feature.

My plan for tomorrow:

To train the classification model for Iris flower project

Student Signature:

Enrique H Y

Faculty-in-Charge Signature:

My objectives for the day:

Date: 17/6/26

To train a ML Classification model using the Iris dataset.

List of activities I did today:

Imported the required scikit - learn libraries.

Created the classification model for Iris dataset.

My critical observation:

The model learns patterns from the training dataset.

What did I learn today:

Learned how to train a classification model using scikit - learn.

What I would have done better:

I could have experimented with that one classification algorithm.

My plan for tomorrow:

To evaluate the performance of the trained iris classification.

Student Signature:

Faculty-in-Charge Signature:

My objectives for the day:

Date: 13/6/25

My objectives for the day:
To learn
approach

List of activities I did today:

Tested the trained model using
testing dataset

compared the predicted values with
actual flower species.

My critical observation:

The model was able to identify
patterns in the Iris dataset.

What did I learn today:

Learned how to evaluate a classification
model using accuracy.

What I would have done better:

I could have compared with results
with another algorithm.

My plan for tomorrow:

To improve the Iris model.

Student Signature:

Faculty-in-Charge Signature:

My objectives for the day:

Date: 19/6/26

To compare the different classification approaches for Iris dataset

List of activities I did today:

Reviewed the Iris classification model developed earlier.

Studied another suitable classification algorithm.

My critical observation:

Different machine learning algorithms can produce different results.

What did I learn today:

Learned how to compare classification models.

What I would have done better:

I could have tested additional algorithms and compared their evaluation metrics.

My plan for tomorrow:

To finalise the Iris flower prediction project and document the result.

Student Signature:

Faculty-in-Charge Signature:

My objectives for the day:

Date: 20/6/20

To complete the Iris flower project

List of activities I did today:

- Reviewed the complete Iris flower project
- checked the dataset preprocessing and model implementation

My critical observation:

A systematic workflow from data preparation to model evaluation

What did I learn today:

Learned how to organise the document a complete ML project

What I would have done better:

I could have explored additional algorithms and tuning techniques.

My plan for tomorrow:

To begin Titanic survival project

Student Signature:
Samiyah

Faculty-in-Charge Signature:

My objectives for the day:

Date: 21/6/26

To understand the titanic survival prediction project

List of activities I did today:

Introduced the titanic survival prediction project

loaded and explored a dataset

Examined the columns and their data types

My critical observation:

Passenger information such as age, gender, class

What did I learn today:

learned how to explore a new dataset before starting model development

What I would have done better:

I could have spent more time analyzing relationships b/w individual features and survival

My plan for tomorrow:

To clean the titanic dataset

Student Signature:

Senilath

Faculty-in-Charge Signature:

Date: 22/6/22

My objectives for the day:

To learn titanic dataset

List of activities I did today:

To identify columns containing missing information.

Applied suitable methods to handle missing values.

My critical observation:

Proper data cleaning is important because incomplete data can affect the accuracy.

What did I learn today:

learned how to identify and manage missing information.

What I would have done better:

I could have tested different approaches

My plan for tomorrow:

to analyze the cleaned Titanic dataset

Student Signature: Saib H Y

Faculty-in-Charge Signature:

My objectives for the day:

Date: 25/6/26

To explore the cleaned titanic dataset

List of activities I did today:

Analysed the passengers information available in dataset

Compared survival rates across different passenger classes

My critical observation:

Gender and passenger class showed noticeable differences in the survival platforms

What did I learn today:

Learned how exploratory data analysis helps in finding meaningful patterns

What I would have done better:

I could have explored more feature combinations to obtain more knowledge

My plan for tomorrow:

To convert categorical feature into a suitable numerical format

Student Signature: Sanket H.

Faculty-in-Charge Signature:

My objectives for the day:

Date: 24/6/21

To transform categorical data into a format suitable for ML.

List of activities I did today:

Identified categorical column in the titanic dataset.

Converted categorical values such as gender into numerical form.

My critical observation:

Machine learning algorithms generally require input data in the numerical form.

What did I learn today:

Learned the data encoding purpose of categorical.

What I would have done better:

I could have compared different encoding methods.

My plan for tomorrow:

To divide the prepared titanic dataset.

Student Signature:

Sanika H

Faculty-in-Charge Signature:

My objectives for the day:

Date: 25/6/26

To divide the prepared titanic dataset into the training and testing portions

List of activities I did today:

Separated the input features from the target values.

divided the dataset into training & testing sets

My critical observation:

Keeping separate training and testing data helps determine whether model can perform well on data.

What did I learn today:

learned how to split a dataset using scikit-learn.

What I would have done better:

I could have experimented with different trainings & testing.

My plan for tomorrow:

To select and implement a suitable classification algorithm

Student Signature: Sanika HY

Faculty-in-Charge Signature:

Date: 26/5/21

My objectives for the day:

To implement a classification of algorithm for the Titanic survival prediction project.

List of activities I did today:

- selected a suitable classification algorithm for the project.
- Imported the required scikit-learn modules.

My critical observation:

The model was able to learn patterns from passenger information and use them to predict survival outcomes.

What did I learn today:

Learned the basic process of building a classification model.

What I would have done better:

I could have experimented with another classification algorithm.

My plan for tomorrow:

To evaluate the performance of the trained Titanic survival prediction model.

Student Signature:

Faculty-in-Charge Signature:

Date 27/6/26

My objectives for the day:

To measure the performance of the trained classification model

List of activities I did today:

Tested and trained model using the testing dataset

Compared the predicted survival values with actual values

My critical observation:

Evaluating the model on unseen data provides a better understanding of the prediction.

What did I learn today:

learned how to calculate and interpret classification

What I would have done better:

I could have used additional validation

My plan for tomorrow:

To analyze the model's errors and explore ways to improve performance

Student Signature: Sunibe H.Y.

Faculty-in-Charge Signature:

Date: 28/6/20

My objectives for the day:

To measure the performance of the trained titanic classification

List of activities I did today:

Tested and trained model using the testing dataset

Calculated the model's accuracy

My critical observation:

Evaluating the model on unseen data provides a better understanding

What did I learn today:

Learned how to calculate and interpret classification accuracy

What I would have done better:

I could have used additional evaluation metrics to study the model

My plan for tomorrow:

To analyze the model's error and explore ways to improve

Student Signature: Sampath

Faculty-in-Charge Signature:

126
Date: 29/6/20

My objectives for the day:

To compare the performance of different classification approaches.

List of activities I did today:

Reviewed the results obtained from the trained model.

My critical observation:

different algorithms can perform differently on the same dataset

What did I learn today:

learned how to compare ML model based on their performance.

What I would have done better:

I could have tested additional algorithms and evaluation measures

My plan for tomorrow:

To finalize the Titanic survival prediction project

Student Signature: Swiketh

Faculty-in-Charge Signature:

Date: 30/6/21

My objectives for the day:

To review the complete titanic survival project

List of activities I did today:

Reviewed the complete workflow of project

My critical observation:

following each stage systematically from data preparation to model validation

What did I learn today:

learned how to organize a complete machine learning project

What I would have done better:

I could have explored additional techniques

My plan for tomorrow:

To begin the house price prediction project understands new dataset

Student Signature:

Faculty-in-Charge Signature:

My objectives for the day:

Date: 1/7/2026

To understand Objective of house price prediction

List of activities I did today:

Introduced the house price prediction problem

My critical observation:

House prices depends on several property features, and different features have different levels.

What did I learn today:

Learned how to understand a new dataset before starting model development

What I would have done better:

I could have spent more time studying the relationship b/w individual property features

My plan for tomorrow:

To inspect the dataset for missing values and begin data preprocessing

Student Signature:
Sanket

Faculty-in-Charge Signature:

My objectives for the day:

Date: 2/7/26

To examine the quality of house price dataset

List of activities I did today:

Checked the dataset for missing values
examined the data types of different features

My critical observation:

Properly cleaned data is important for obtaining reliable results.

What did I learn today:

learned how to identify missing values and inspect data types using Pandas

What I would have done better:

I could have compared different methods for handling missing values.

My plan for tomorrow:

To perform exploratory analysis of the house price dataset

Student Signature: Caibell Y

Faculty-in-Charge Signature:

My objectives for the day:

Date: 3/7/26

To understand the main factors that influence house prices

List of activities I did today:

Performed basic exploratory data analysis on the house price dataset

My critical observation:

Property characteristics such as size and other available features can have a noticeable relationship

What did I learn today:

Learned how EDA can be used to understand a regression dataset

What I would have done better:

I could have explored more relationships between the different property features

My plan for tomorrow:

To select relevant features and prepare the dataset for regression

Student Signature: Saibhiv

Faculty-in-Charge Signature:

My objectives for the day:

Date: 4/7/21

To identify the most useful features for predicting house prices.

List of activities I did today:

Reviewed the features available in dataset

My critical observation:

selecting relevant features can help the model focus on the information that has greater influence

What did I learn today:

learned how feature selection is applied to regression problems.

What I would have done better:

I could have compared different combinations of features to identify the most effective set

My plan for tomorrow:

To split the prepared house price dataset into training and testing sets

Student Signature: Sanika

Faculty-in-Charge Signature:

My objectives for the day:

Date: 5/7/2026

To implement a linear regression model

List of activities I did today:

- Selected the linear regression
- split the selected house price dataset

My critical observation:

I observed that separating training & testing data is important to check whether the model can perform well or not

What did I learn today:

Learned how to divide a dataset into training and testing sets

What I would have done better:

I could have experimented with different train-test split ratios and understood their effect

My plan for tomorrow:

To train a regression model using the prepared training dataset

Student Signature: Sanika+17

Faculty-in-Charge Signature:

My objectives for the day:

Date: 6/7/20

To train a ML regression model using the prepared training dataset

My objective: 10

List of activities I did today:

Selected a suitable regression algorithm for the house price prediction algorithm. Provided the selected features as input to the model.

My critical observation:

I observed that the model uses the relationship between property features & house prices.

What did I learn today:

Learned the basic process of training a regression model.

What I would have done better:

I could have tried different regression algorithms and compared their predictions.

My plan for tomorrow:

To evaluate the trained house price prediction model.

Student Signature: Sarik 14

Faculty-in-Charge Signature:

Date: 7/7/20

My objectives for the day:

To evaluate the performance of trained house price

List of activities I did today:

Used the testing dataset to generate house price predictions

My critical observation:

I observed that the difference between actual & predicted values

What did I learn today:

Learned how to evaluate a regression model using appropriate metrics

What I would have done better:

I could have compared the performance of multiple regression

My plan for tomorrow:

To improve the house price prediction model

Student Signature: Scribs+17

Faculty-in-Charge Signature:

My objectives for the day:

Date: 21/7/26

To improve the performance of the house price model.

List of activities I did today:

Reviewed the performance of trained regression model.

My critical observation:

I observed that changing the model setting can affect the prediction performance.

What did I learn today:

Learned the importance of improving & tuning a ML model.

What I would have done better:

I could have tested more parameter combinations and compared multiple regression.

My plan for tomorrow:

To finalize the house price prediction model.

Student Signature: Sanket H Y.

Faculty-in-Charge Signature:

14/26
Date: 4/2/26

My objectives for the day:

To finalize the house price prediction model

List of activities I did today:

Reviewed the complete house price prediction project

My critical observation:

I observed the complete workflow of a ML project

What did I learn today:

I could ~~not~~ have explored more regression algorithms and compared their performance

What I would have done better:

I would have explored more sets

My plan for tomorrow:

To start working on another ML project

Student Signature:

Faculty-in-Charge Signature:

My objectives for the day:

Date: 10/7/26

to begin working on the next ML project

List of activities I did today:

Started working on the next ML project

Reviewed the project requirements of dataset

My critical observation:

I observed that understanding the dataset and identifying target variable.

What did I learn today:

Learned how to begin a new ML project

What I would have done better:

I could have explored the dataset more deeply

My plan for tomorrow:

To perform data preprocessing on the new dataset

Student Signature: Sanibatur

Faculty-in-Charge Signature:

My objectives for the day:

Date: 11/7/24

To preprocess the dataset

List of activities I did today:

Checked the dataset for missing values

Checked the duplicate records

My critical observation:

I observed that the raw datasets may contain missing information

What did I learn today:

Learned the importance of data preprocessing

What I would have done better:

I could have explored different methods for handling different values

My plan for tomorrow:

To perform EDA on dataset

Student Signature: Sanib +14

Faculty-in-Charge Signature:

My objectives for the day:

Date: 12/7/26

To perform EDA on the cleaned dataset

List of activities I did today:

Examined the cleaned dataset using basic statistical information

My critical observation:

I observed the EDA helps in understanding the dataset more clearly.

What did I learn today:

Learned how to perform basic exploratory data analyses

What I would have done better:

I could have created more visualizations

My plan for tomorrow:

To select the most relevant features from dataset

Student Signature:

Faculty-in-Charge Signature:

My objectives for the day:

Date: 13/7/26

To identify the most relevant features from dataset

List of activities I did today:

Reviewed the results obtained from EDA.

Removed less useful or unnecessary features

My critical observation:

I observed that selecting relevant features can reduce unnecessary information

What did I learn today:

Learned the importance of feature selection

What I would have done better:

I could have compared different feature selection

My plan for tomorrow:

To split the data into training & testing.

Student Signature: Senika #14

Faculty-in-Charge Signature:

My objectives for the day:

Date: 14/7/20

To prepare the selected features for model trainings.

List of activities I did today:

Reviewed the selected features from previous day's work.

My critical observation:

I observed that keeping separate training and testing data is important.

What did I learn today:

Learned how to split a dataset into training and testing.

What I would have done better:

I could have experimented with different train - test ratios.

My plan for tomorrow:

To generate predictions using trained model.

Student Signature: Savitri

Faculty-in-Charge Signature:

My objectives for the day:

Date: 15/7/26

To begin the Iris flower prediction project

List of activities I did today:

Introduced the Iris flower prediction problem

Loaded the Iris dataset using Python

My critical observation:

Observed that Iris dataset contains measurable flower characteristics.

What did I learn today:

Learned the basics of classification problems.

What I would have done better:

I could have explored the relationships between the flower features.

My plan for tomorrow:

To preprocess and explore the Iris dataset

Student Signature: Saniketty

Faculty-in-Charge Signature:

Date: 16/7/26

My objectives for the day:

To explore the Iris dataset in detail

List of activities I did today:

checked the Iris dataset for missing and duplicate values.

Analyzed the distribution of sepal and petal.

My critical observation:

I observed that petal measurements show noticeable difference between the Iris species.

What did I learn today:

learned how to perform EDA on a classification dataset.

What I would have done better:

I could have used additional visualisation to study relationships.

My plan for tomorrow:

to split the Iris dataset into training and testing sets

Student Signature: Sanipathy

Faculty-in-Charge Signature:

5/12/26
My objectives for the day:

Date: 17/7/26

To prepare the Iris dataset for classification model training.

List of activities I did today:

Reviewed the cleaned Iris dataset

split the dataset into training and testing sets.

My critical observation:

I observed that separating training & testing data helps determine whether the classification model can correctly identify flower species.

What did I learn today:

learned how to prepare a dataset for classification.

What I would have done better:

I could have experimented with different train-test

My plan for tomorrow:

to generate prediction for testing data

Student Signature: Sanibotly

Faculty-in-Charge Signature:

Date: 18/7/26

My objective: 30

My objectives for the day:

To train a classification model for Iris flower prediction

List of activities I did today:

Trained the selected classification model using training dataset.

Reviewed the initial classification results.

My critical observation:

I observed that the model was able to learn patterns from the flower measurements.

What did I learn today:

Learned how to train a classification model.

What I would have done better:

I could have trained more than one classification algorithm and compared their results.

My plan for tomorrow:

To evaluate Iris classification model

Student Signature: Sanku

Faculty-in-Charge Signature:

My objectives for the day:

To improve the Iris flower prediction model

Date: 20/7/26

List of activities I did today:

Reviewed the performance of the existing Iris classification

checked the accuracy of each model.

My critical observation:

Different algorithms produce different results even when trained on same dataset.

What did I learn today:

Learned how to compare different ML classification

What I would have done better:

I would have experimented with more algorithms and tuned their parameters.

My plan for tomorrow:

To finalize Iris flower prediction

Student Signature: Saniketty

Faculty-in-Charge Signature:

Date: 19/7/26

My objectives for the day:

To evaluate the performance of trained
iris classification

List of activities I did today:

Tested and trained model using
the testing dataset.

Calculated the model's accuracy.

My critical observation:

I observed that evaluating the
model on unseen testing data
gives better understanding.

What did I learn today:

Learned how to evaluate a
classification model using accuracy.

What I would have done better:

I could have used additional
evaluation metrics.

My plan for tomorrow:

To compare different classification
algorithms and start noise prediction
model.

Student Signature: Sanket

Faculty-in-Charge Signature:

My objectives for the day:

Date: 21/9/26

To begin the continue working on titanic survival prediction

List of activities I did today:

Reviewed the titanic dataset and previously completed preprocessing steps

Tested the model with sample passenger data

My critical observation:

Observed that the prediction depends on the combination of passenger features rather than single attribute

What did I learn today:

Strengthened my understanding of classification based prediction

What I would have done better:

I could have tested the model with a wider range of passenger inputs

My plan for tomorrow:

To evaluate titanic survival prediction model

Student Signature: Sanket H

Faculty-in-Charge Signature:

Date: 22/11/26

My objectives for the day:

To evaluate the titanic survival prediction model

List of activities I did today:

Tested the trained titanic classification model using the testing dataset

Calculated the model's accuracy

My critical observation:

I observed the evaluating model with unseen passenger data provides better understanding

What did I learn today:

Learned how to evaluate a classification model using accuracy

What I would have done better:

I could have used additional evaluation techniques

My plan for tomorrow:

To improve the titanic survival prediction model

Student Signature: Sanjay 14

Faculty-in-Charge Signature:

126
My objectives for the day:

Date: 23/7/26

To improve the performance of the titanic survival prediction model.

List of activities I did today:

Reviewed the evaluation results of the titanic model.

Compared the updated results with the previous model results

My critical observation:

I observed that model performance can be improved ~~be~~ carefully reviewing prediction errors

What did I learn today:

Learned how to identify areas for improvement in a classification model

What I would have done better:

I could have tested additional classification algorithms

My plan for tomorrow:

To perform final testing of the titanic survival prediction model

Student Signature: Savithy

Faculty-in-Charge Signature:

Date: 24/7/26

My objectives for the day:

To perform final testing of the titanic survival prediction

List of activities I did today:

Tested and trained model with different passengers input values

Provided passengers details such as age, sex, passenger class and fare.

My critical observation:

I observed that the model can use passengers characteristics to generate survival prediction.

What did I learn today:

Learned how to use a trained classification model for real-time sample prediction.

What I would have done better:

I could have tested a larger variety of passengers combinations to further verify the model's prediction.

My plan for tomorrow:

To organize the titanic survival prediction project

Student Signature: Sanibetty

Faculty-in-Charge Signature:

17/12/26
My objectives for the day:

Date 25/7/26

To finalize the titanic survival prediction model.

List of activities I did today:

Reviewed the final titanic prediction model and its results.

Verified the final survived / Not survived prediction model.

My critical observation:

I observed that reviewing the complete project after development helps identify errors and answers all stages of ML.

What did I learn today:

Learned the importance of organizing and reviewing a Machine Learning project.

What I would have done better:

I could have documented each step in greater detail while developing the project to make the final document easier.

My plan for tomorrow:

To prepare a summary of the skills and concepts learned.

Student Signature: Savika HY

Faculty-in-Charge Signature:

Date: 26/6/26

My objectives for the day:

To review all Machine Learning projects

List of activities I did today:

Reviewed the house price prediction project and its regression workflow

My critical observation:

I observed that different datasets require different approaches but workflow remains similar.

What did I learn today:

Strengthened my understanding of regression and classification problems.

What I would have done better:

I could have maintained more detailed notes and comparisons between the different models.

My plan for tomorrow:

To review the technical concepts of Python libraries used during my internship

Student Signature: _____

Sanika

Faculty-in-Charge Signature: _____

My objectives for the day:

Date 23/6/26.

To complete and review all the machine learning projects undertaken during internship.

List of activities I did today:

Completed the final review of the house price prediction, house price prediction

Reviewed the complete machine learning workflow followed in each project

My critical observation:

I observed that practical project work helped me understand how machine learning concepts are applied.

What did I learn today:

Strengthened my practical understanding of machine learning

What I would have done better:

I could have spent more time experimenting with different algorithms

My plan for tomorrow:

The major project is completed

Student Signature: Seniketty

Faculty-in-Charge Signature:

Date: 29/7/26

My objectives for the day:

To review the completed internship documentation

List of activities I did today:

Reviewed the documentation of the three machine learning projects

organized the final internship materials for submission and presentation

My critical observation:

I observed that proper documentation is important for clearly communicating the work.

What did I learn today:

Learned how to organize and present technical project work

What I would have done better:

I could have maintained the documentation ~~at~~ alongside the project work

My plan for tomorrow:

The project is completed
